The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 47-55, 57 and 59-64 are again rejected under 35 U.S.C. 102(e) as being anticipated by Jaffe et al. (U.S. Patent No. 7,077,891; hereinafter "Jaffe"). As pointed out in the previous Office action, the reference discloses a process for separating materials of the type recited (see col. 1, lines 32-36) with an adsorbent material subjected to a traveling electric field (see col. 18, line 42). This reference also teaches alternating adsorption/desorption cycles (see col. 6, lines 7, 110 and 14; and col. 17, lines 16-17); and therefore, the traveling electric field of this reference device must inherently desorb the adsorbed substance, as now recited in the process claims of this application. Furthermore, Jaffe discloses the use of additional purification materials of the type recited (see col. 18, lines 54 and 56), and this is all that is required by claims 47-55, 57 and 59-64.

Applicant's arguments filed December 11, 2006 have been noted and carefully considered but are not deemed to be persuasive of patentability. Applicant argues that Jaffe does not disclose a step of electrically charging an adsorbent material so as to generate a traveling electric field to desorb the adsorbed material. It is pointed out, however, that since the reference introduces a plurality of substances of the type recited

Art Unit: 1724

(see col. 1, line 34) to an adsorbent material of the type recited (see col. 1, line 33), and electrically charges this adsorbent material (see col. 18, line 42) during a series of adsorption and desorption cycles (see col. 6, lines 7, 110 and 14; and col. 17, lines 16-17), the results obtained by this reference process must inherently be the same as those obtained by Applicant's process. It is axiomatic that one who performs the steps of a process must, in so doing, necessarily produce all of its advantages, for these advantages naturally flow from it, and are an inseparable part of it. Mere recitation of a newly discovered function (i.e. desorption of an adsorbed substance by a traveling electric field) that is inherently possessed by things in the prior art does not cause a claim drawn to those things to distinguish over the prior art. *General Electric. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
